The Process
Our service is opposed double disc grinding, which is a method of using two opposed abrasive disc wheels to remove stock simultaneously from both sides of parts, which have parallel faces. This process can combine heavy stock removal with precision finishing in the same operation to produce a high degree of flatness, parallelism and uniformity in size and surface finish. The most unique characteristic of double disc grinding is its capability to finish high volumes of parts to extremely close tolerances, with repeatable accuracy, in the same automated operation. Opposed double disc is a precision form of grinding that in some cases can obtain lapped tolerances and is significantly faster.

Our Quality System
We are ISO/TS-16949-2002 Certified

We at BETTER WAY GRINDING believe our standards are what make our company what it is today. We expect the highest quality of work from each of our employees and managers. We provide Statistical Process Control (SPC) for customers who require it.

Our Team
Our management has a combined experience of over 80 years. The training our operators have gone through has developed in each one, a thorough understanding of Opposed Double Disc Grinding and customer expectations with regards to our methods of efficiency in production and Customer Quality Requirements.
BETTER WAY GRINDING’s goals are to build customer satisfaction by utilizing its three strongest assets:

- Creative Employees whose right it is to maintain unmatched levels of quality.
- Production and Processing Capabilities which are continuously improved to be state of the art.
- And finally, a Management Staff that is committed to providing Quickly Opposed Double Disc Grinding at a real value to the customer.

By putting our customers first, we will remain at the forefront in their perception of Opposed Double Disc Grinding.

---

Our Goals

---

Our Customers

BETTER WAY GRINDING provides opposed double disc grinding service to a wide range of small to medium sized businesses. BETTER WAY GRINDING also serves large customers who exclusively supply parts to the computer, automotive, aerospace, and defense industries across the continental United States and countries over seas.

---

In-House Sawing

We compliment our double disc grinding by offering our customers a sawing operation to complete their process planning.

---

Our Facility

Our 13,500 square foot facility speaks for itself in terms of efficiency and cleanliness. Our shipping, receiving and production departments are designed for maximum productivity. A courteous, courteous and dedicated staff runs the office, and epitomizes the philosophy of the entire company - “Quality is our most important service and the customer comes first.”

---

The Company

BETTER WAY GRINDING has been in business under the same ownership since 1963. Over the years it has existed, the company has evolved from a small one-man shop to an organization that employs a team of skilled operators working on a wide range of equipment.

VOLUME IS OUR SPECIALTY: Our feed-through grinding machines are equipped with various automated systems which have the capability of processing 40,000 or more pieces per hour. We have various means by which we automate our equipment to give our customers the lowest possible price for quantities. We also do spot type grinding, so we welcome 1 to 1,000,000,000 parts.
